THE PROBLEM

What happens when using Centralized Exchanges

✓ Alice wants to withdraw her crypto asset from the CEX she's using

✗ The problem is that Alice also cares about her privacy, she does not want anyone to access her transaction history to associate her on-chain activity with her identity.

THE PROBLEM

What happens when using Centralized Exchanges :

Option 1 : Keeping your assets on the CEX

Risks of exchange hacks, downtime, or withdrawal restrictions.

Option 2 : Withdrawing your assets on your personal wallet

Exposing personal information and transaction history, Transaction activities being publicly visible on the blockchain

How can we enable private and secure crypto withdrawals while preserving user anonymity and confidentiality?

THE SOLUTION:

**CYPHER
DEPOSIT**

PRIVATE TRANSFERS

Cypher Deposit offers a 3rd option:

**Private Crypto
Withdrawals**

**Anonymous Transactions
secured by advanced
cryptography**

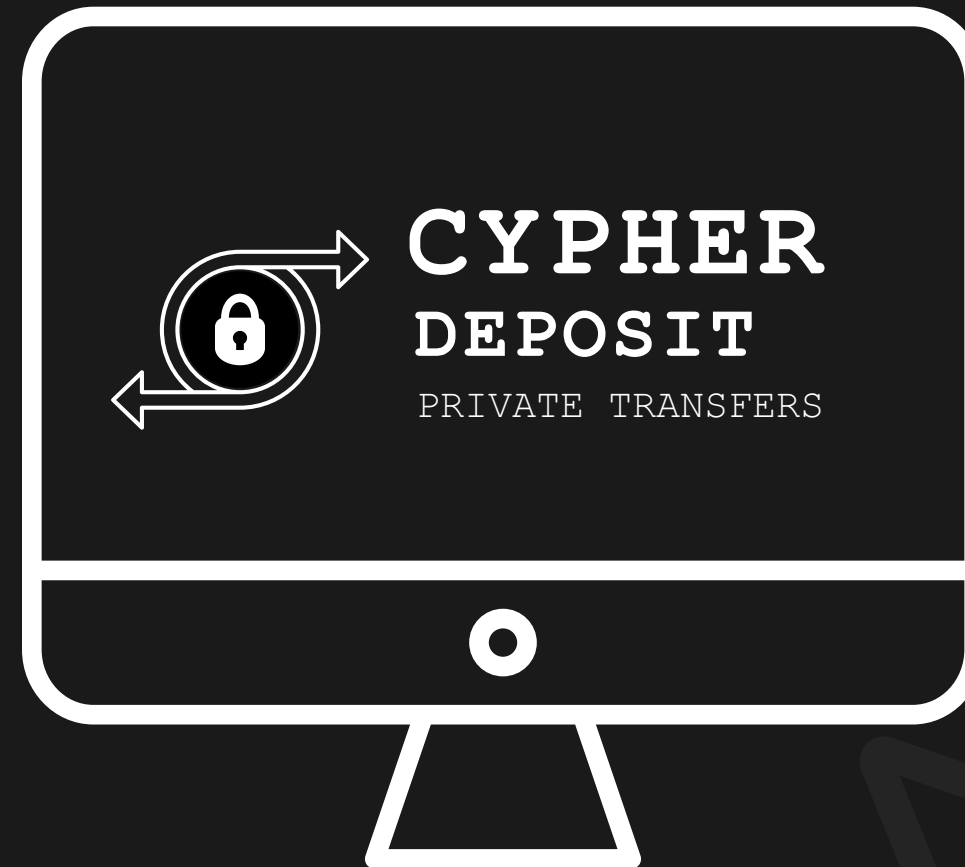

Private RPC endpoint

How does it work?

HOW IT WORKS STEP BY STEPS

Step 1 : Generating the burner address

**GENERATING
BURNER
ADDRESS**

HOW IT WORKS STEP BY STEPS

Step 2 : Burner address creation

HOW IT WORKS STEP BY STEPS

Step 3 : Funds Transfers and withdrawal

**ZK ADDRESS
CREATION**

**FUNDS
TRANSFER
TO ZK
ADDRESS**

**Funds
available on
ZK address**

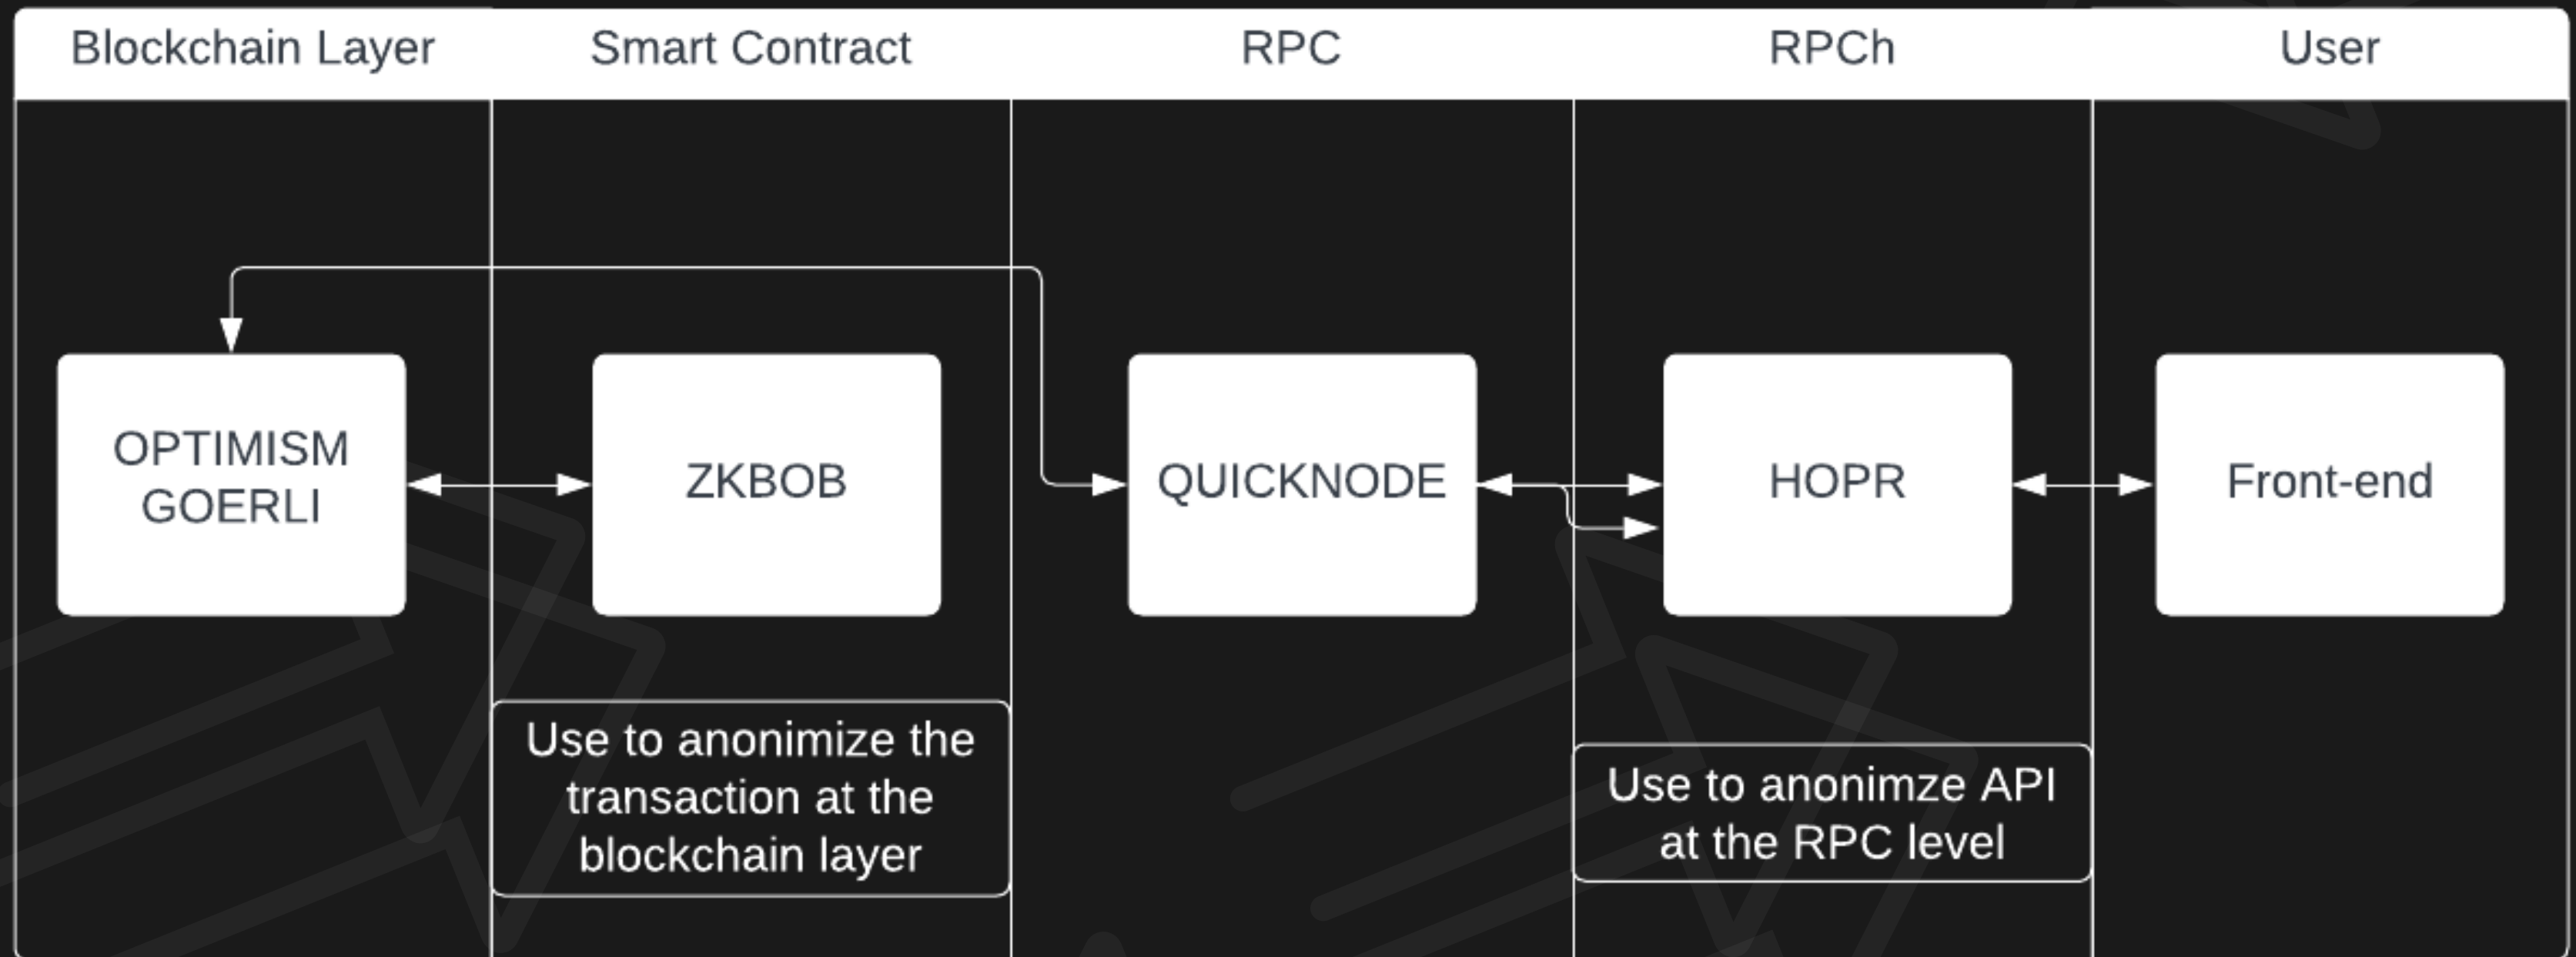

**WITHDRAWAL
ON
PERSONAL
ADDRESS**

Alice

TECHNOLOGY STACK

ROADMAP:

Here are some of the following steps for our project

Q4 2023

- Enhance ZKBOB Integration
- Scaling and Performance Improvements
- Filecoin Bacalhau Integration:

Q1 2024

- Third-Party Security Audit
- Compliance with Regulatory Standards
- User Education and Onboarding:

Q2 2024

- IPFS Protocol Frontend Development
- Push Notification Refinement (?)
- User Support and Feedback Loop

Q3 2024

- Global Expansion
- Strategic Partnerships
- Advanced Features and Innovation
